~$43M
Into customer savings, one campaign

3.3×
Investment education MAU

2.4–3×
Client trading activity

+10–15%
Segment revenue

Product manager with 8 years on user-facing products in fintech, investing, and marketplaces. At T-Bank I owned investment advisory and education for retail investors end to end: reach 1.5M → 5M, the business line reached break-even. Earlier I built a B2B product from zero and closed its first 9 deals myself.

T-Bank • Fintech

2022 — present

Digital bank with 54M+ active customers. I led three lines of business: 74 people in 8 teams.

Head of Product • Investments: advisory and education

Investment advice for Mass Market, Affluent, and HNWI clients, and investment education inside the investment app. Goal: grow segment revenue and turn learners into active investors.

Cross-functional leadership of 30 people in 3 teams

- Analyzed how clients buy and sell assets and which actions are mistakes, then changed the success metric for education from views to trades and defended the strategy and unit economics with top management: MAU 3.3× in a year to 800K–1M, client trading activity 2.4–3× with a higher average order value.
- Launched a savings marathon and an investment trainer: ~$43M into customer savings, 730K+ trainer users in 1.5 months. finAward'26, best investment product of 2026.
- Built ML recommendations, one scenario per client segment, and a multi-agent AI system for wealth managers: advisor time per client –30%, 2× more new clients, segment revenue +10–15%.

Product Lead • Origination platform

Platform every business line uses to open its products for customers: investment accounts, cards, SIM, insurance. Goal: more products per customer and faster delivery for every business line.

Cross-functional leadership of 32 people in 4 teams

- Replaced one-off opening flows with reusable modules: products per customer 1.5 → 2.5, product usage after opening +10 pp for non-financial and +3–4 pp for financial products.
- Moved 3 teams off legacy, retired redundant services, and coordinated 4+ teams with a predictable release plan: delivery 2.5× faster, stakeholder CSAT 6 → 8 out of 10.

Product Lead • AI support platform

Voice and text bots, ML pipelines, and process automation for customer support across the bank. Goal: automate more requests and answer faster at lower support cost.

Cross-functional leadership of 12 people

- Built one process with intent writers and the support automation team, plus forecasting and routing to the right scenario: first response 1.5 min → 15–20 s, support staff costs –10–15%.
- Rolled out ML models through A/B tests, not to everyone at once: automated share of support +16 pp, intent recognition accuracy +8 pp.

GitJob • HR-tech • Senior Product Manager

2021 — 2022

B2B platform that finds developers by their GitHub profiles and code instead of résumés. Goal: launch from zero and close the first B2B deals.

Cross-functional leadership of 6 people

- Built the product from zero: customer discovery with recruiters, the PRD, and the ranking and matching logic: 0 → 3M searchable candidates in 4 months.
- Replaced the team mid-build and shipped the MVP in 4 months, development time 4× shorter; ran sales myself: first B2B deal in the first month after launch, then 8 more.

iReg • Legal-tech • Senior Product Manager

2020 — 2022

Web service for copyright protection in 100+ countries: e-signature certificate and secure storage of the work. Goal: grow the customer base and the average order value.

Cross-functional leadership of 12 people

- A/B-tested the pricing model, from one-off purchase to subscription and B2B: average order value 5×, customer base 2.5–3×.
- Took the product abroad via Microsoft, EY, and Startupbootcamp Global Pilots: first clients in the UK, Poland, Brazil, and China.

Pandao (Mail.ru) • E-commerce • Product Manager

2018 — 2020

Top-2 marketplace for goods from China across the CIS, mobile app and web. Goal: grow the audience and checkout conversion.

Cross-functional leadership of ~40 people

- A/B-tested search ranking, cart, and checkout: checkout conversion +3 pp in the app and +1.8 pp on mobile web, average order value +60%.
- Grew acquisition, ASO, and retention: MAU 2M → 4.7M.
