Professional Summary

Head of Product with 8 years of experience in fintech, AI, EdTech, and e-commerce. Most of my career has been in large B2C and platform products at T-Bank and Mail.ru, plus two startups built from zero. I set product strategy, rebuild platforms, and lead cross-functional teams of up to 74 people. Recent results: segment revenue +10–15% with an AI advisory system, investment education MAU 3.3× in a year, and 2.5× faster delivery on a bank-wide platform.

Professional Experience

T-Bank | 2022 – present

Digital bank with 54M+ active customers. I led three lines of business: 74 people in 8 teams.

Head of Product, Investments: advisory and education

As Head of Product in Investments, I was responsible for investment advice for Mass Market, Affluent, and HNWI clients and for investment education, with client trades as the key product metric. I ran market and segment research, built the metrics tree in Amplitude, BI, and Tableau, and defended the strategy and unit economics with top management. Cross-functional leadership of 30 people in 3 teams.

- Built ML recommendations and a multi-agent AI system for wealth managers: ~100 Private clients onboarded, 3–5K Premium clients use the advice weekly, manager time per client −30%, 2× more new clients, segment revenue +10–15%.
- Turned education into part of the investment journey: reach 1.5M → 5M, MAU 3.3× in a year to 800K–1M, client trading activity 2.4–3×. The business line reached break-even.
- Launched an investment trainer with 730K+ users in 1.5 months and a savings marathon that brought ~$43M into customer savings. finAward'26, best investment product of 2026.

Product Lead, Origination platform

As Product Lead, I owned the strategy and the roadmap of the platform every business line uses to open its products in one click: cards, investments, SIM, and insurance. I researched competitors and internal customers, prioritized the backlog by business value, and led the move off the legacy stack. The goal was more products per customer and faster delivery for every business line. Cross-functional leadership of 32 people in 4 teams.

- Replaced one-off opening flows with reusable modules: products per customer 1.5 → 2.5, product usage after opening +10 pp for non-financial and +3–4 pp for financial products.
- Moved 3 teams off the legacy stack, split out shared modules, and coordinated 4+ teams: delivery 2.5× faster.
- Gave business lines a predictable release plan and set quarterly goals by business value: internal CSAT 6 → 8 out of 10, team efficiency +20%.

Product Lead, AI support platform

As Product Lead, I was responsible for voice and text bots, ML pipelines, and process automation for customer support across the bank, with the automated share of support as the key metric. Cross-functional leadership of 12 people.

- Merged 3–4 disconnected microservices into one platform for every business line: delivery 1.5× faster, automated share of support +16 pp.
- Launched ML classification and routing, tested with A/B: requests the bot resolves on its own +15 pp, intent recognition +8 pp, first response 1.5 min → 15–20 s, support staff costs −10–15%.

GitJob | 2021 – 2022

As Senior Product Manager, I owned discovery, ranking quality, the roadmap, and sales for a B2B platform that finds developers by their GitHub profiles and code instead of résumés. The goal was to launch from zero and close the first B2B deals. Cross-functional leadership of 6 people.

- Wrote the PRD and designed the candidate ranking, checked with recruiters through custdev and A/B tests: 0 → 3M searchable candidates in 4 months.
- Shipped the MVP in 4 months; replaced the team mid-build and cut development time 4×.
- Ran sales myself: first B2B deal in the first month after launch, then 8 more.

iReg | 2020 – 2022

As Senior Product Manager, I owned the vision, the full funnel from acquisition to retention, and the pricing model of a web service for copyright protection in 100+ countries. The goal was to grow the customer base and the average order value. Cross-functional leadership of 12 people.

- A/B-tested the pricing model, from one-off purchase to subscription and B2B: average order value 5×, customer base 2.5–3×.
- Rebuilt onboarding and content for each customer segment: purchases per customer 1 → 2.5.
- Doubled release cadence to 3 per quarter and took the product abroad via Microsoft, EY, and Startupbootcamp Global Pilots: first clients in the UK, Poland, Brazil, and China.

Pandao (Mail.ru) | 2018 – 2020

As Product Manager, I owned the full cycle from discovery to delivery for a top-2 marketplace for goods from China across the CIS, app and web: research, the roadmap, A/B tests, acquisition, and ASO. The goal was to grow the audience and checkout conversion. Cross-functional leadership of ~40 people.

- A/B-tested search ranking, cart, and checkout: checkout conversion +3 pp in the app and +1.8 pp on mobile web, average order value +60%.
- Grew acquisition, ASO, and retention: MAU 2M → 4.7M, web audience 1.5×, app audience 1.2×.

Education

Software engineering, Ivanovo State Power Engineering University (IGEU), 2025

Certificates

Product Heroes, Heroes.camp, Jan 2026
Data-driven product management, GoPractice, Jun 2019
